

PRIYANKA KUMARI

SOFTWARE ENGINEER

Fast product delivery with AI-assisted engineering, high ownership, and readiness to dive into new technologies.

LinkedIn-Profile

Github-Profile

CORE STACK

- MERN: MongoDB, Express, React, Node.js
- JavaScript, Python, C#
- Material-UI, Highcharts
- REST APIs, Microservices, Redis
- Automations: Python, Jenkins

ENGINEERING TOOLS

- GitHub Copilot
- Git and CI/CD workflows
- Cloud Foundry
- JIRA

STRENGTHS

- End-to-end ownership
- AI-accelerated implementation
- Reliable production delivery
- Fast adaptation to new tools

AWARDS

- Division Recognition Award (twice)
- 2nd Prize: Hackathon and Innovation Fair
- College Batch Topper

PROFESSIONAL SUMMARY

Software Engineer with 9+ years of experience building enterprise engineering platforms across React frontend, Node.js microservices, and .NET systems. Delivered feature-focused solutions for CI reporting, build tracking, pull request progress, test automation, and program visibility. Primary impact includes full ownership of CI Tool WebUI, ownership of 4 API CI Tool backend services, frontend ownership for APK Infra Client, and end-to-end ownership of PLCPortal. Led migration of all WebUI deployments from Cloud Foundry to a self-hosted Kubernetes cluster with common gateway after architecture exploration and pre-production validation.

9+	MERN	5	K8s
YEARS EXPERIENCE	OWNED END TO END	PROJECTS	CLOUD MIGRATION LED

EXPERIENCE

Software / Infrastructure and DevOps / Full-stack Engineer
Intel Technology India Pvt. Ltd.

Dec 2016 - Present | Bengaluru

- Owned and implemented the CI Tool WebUI and key backend services in a distributed platform, delivering end-to-end features from requirement analysis through production rollout.
- Built a Python and Jenkins automation workflow to generate and publish custom builds based on specific event triggers and configuration requirements
- Built high-usage product workflows for reservation, task execution, and build orchestration, including quick-build, retrigger and prefill, and role-based operational actions.
- Implemented service-layer features across PR, program, build, and queue domains with robust APIs, filterable queries, validation controls, health metrics, and event publication.
- Increased platform performance with Redis caching improvements in lifecycle-tracking applications.
- Led end-to-end migration of all WebUI deployments from Cloud Foundry to self-hosted Kubernetes with common gateway, including exploration, pre-production testing, and final rollout.
- Improved production stability by resolving edge cases in filtering logic, task forms, table behavior, reservation paths, and API request handling.
- Accelerated implementation using GitHub Copilot for scaffolding and refactoring, backed by review and testing discipline.

WORK/PRODUCT IMPACT

Kubernetes Migration (Cloud Foundry to Self-Hosted)

- Defined migration architecture and execution plan to move all WebUI deployments to self-hosted Kubernetes behind a common gateway.
- Ran pre-production validation and integration testing to de-risk release behavior, routing, and service interoperability.
- Completed production migration with improved scalability, operational control, and deployment consistency.

WHAT I BRING

- Rapid full-stack delivery from requirement to release.
- Strong balance between delivery speed and quality.
- Cross-team collaboration and stakeholder communication.
- Hands-on ownership of critical internal products.

CERTIFICATIONS

- Product Assurance and Security White Belt
- AI Everywhere - NLP Applications with Python

KEYWORD FIT

- Full Stack Engineer
- MERN Developer
- Software Engineer
- React Developer
- Node.js APIs
- AI Productivity

CI Tool Web UI and API Services (Full Ownership)

- Created the CI Tool WebUI from scratch and delivered a production-ready baseline for end-to-end CI reporting and tracking.
- Unified key engineering views in one interface: program and configuration data, build pipelines by type with status, live logs, and PR progress.
- Implemented core operational features including reservation flows, task creation and execution, details views, and role-aware action controls.
- Enhanced device-management workflows with richer metadata, flexible filters, and admin registration support for day-to-day operations.
- Improved reliability by fixing production issues in path selection, reservation identifiers, form-state handling, and reset behavior.
- Create 4 API services based required for UI to interact with database for multiple use-cases and all actions.

APK Infra Client UI (Frontend Ownership)

- Owned frontend use cases for app-tag based compatibility automation, including create, edit, and share list workflows and test execution using target IP inputs.
- Expanded reporting depth with feature additions for compatibility insights, ABI, CPU/memory, Dex2Oat, and AI-related result dimensions.
- Implemented operator-focused features such as install-lite and launch-lite, recent-task views, compare/export capabilities, and app-version handling.

PLCPORTAL OWNERSHIP (.NET)

- Owned PLCPortal for full feature delivery, defect resolution, enhancements, and production support changes.
- Built and maintained program-progress, requirement, validation, and scan dashboards by integrating Jira, DNG, HP ALM, and Zephyr Scale data sources.
- Single-handedly migrated the platform from .NET 3 to .NET 5, resolving compatibility gaps and replacing end-of-life modules.

AI-ASSISTED ENGINEERING

- Use GitHub Copilot to accelerate prototyping, repetitive implementation, and safer refactoring passes.
- Validate AI suggestions through code review, testing, and production-oriented edge-case checks.
- Adopt new tools quickly when they reduce cycle time and improve maintainability.

EDUCATION

B.Tech, Computer Science BPUT, Bhubaneshwar | 2016 | CGPA: 8.55

Higher Secondary (CBSE) Gurunanak HSS, Ranchi | 2011 | 72%

Secondary School (CBSE) JNV, Gumla | 2009 | 91.6%

TARGET ROLE FIT

Tailored for Full-Stack MERN Software Engineer opportunities requiring fast delivery, strong system reliability, AI-assisted development workflows, and readiness to learn new technologies quickly.
