Priyanka Kumari

Software | Infrastructure and DevOps | Full Stack Engineer | MERN and Microservices

Bengaluru, India | +91 8292634243 | priyankasahu.1011@gmail.com | LinkedIn | Portfolio | Github

PROFESSIONAL SUMMARY

Software Engineer with 9+ years of experience delivering enterprise engineering platforms across React frontend, Node.js microservices, and .NET systems. Primary impact includes full ownership of CI Tool WebUI, ownership of core CI Tool backend 4 API services, frontend ownership of APK Infra Client, and end-to-end ownership of PLCPortal. Delivered feature-driven solutions for CI reporting, build orchestration, PR progress, and program visibility in unified operational workflows.

Led migration of all WebUI deployments from Cloud Foundry to a self-hosted Kubernetes platform with common gateway, covering architecture exploration, pre-production testing, and final production rollout.

CORE SKILLS

Languages: JavaScript, Python, C#

Frontend: ReactJS, Material-UI, Highcharts

Backend: Node.js, Express.js, REST APIs, Microservices

Platforms: Cloud Foundry, Kubernetes, CI/CD, Git

Automations: Python, Jenkins

Data and Quality: MongoDB, Redis, Protractor, Unit and Integration Testing

EXPERIENCE

Software Engineer | Intel Technology India Pvt. Ltd.
Dec 2016 - Present | Bengaluru, India

- Contributed to CI Tool as a distributed platform with one frontend and multiple backend services; fully owned WebUI and owned and implemented multiple backend API services required for data retrieval and processing.
- Built a Python and Jenkins automation workflow to generate and publish custom builds based on specific event triggers and configuration requirements and other automations.
- Created the CI Tool WebUI from scratch and delivered a production-ready baseline for end-to-end CI reporting and tracking in one place.
- Unified program and configuration visibility, build pipelines by type with status tracking, live log access, and pull request progress in a single operational interface.
- Implemented backend capabilities across PR, program, build, and queue services with APIs, filters, validation, metrics, and event publication enhancements to support engineering operations at scale.
- Improved reliability by resolving production issues in reservation flows, path selection, form behavior, reset logic, and request-header validation.

AI-ASSISTED ENGINEERING APPROACH

- Use GitHub Copilot to accelerate implementation of repetitive patterns, API wiring, and UI scaffolding while maintaining delivery speed.
- Validate AI-assisted output through code review, production-oriented edge-case checks, and testing discipline to preserve reliability.
- Rapidly evaluate and adopt new tools when they improve engineering throughput, maintainability, and operational quality.

KEY PRODUCT OWNERSHIP AND IMPACT

Kubernetes Migration (Cloud Foundry to Self-Hosted)

- Led end-to-end exploration, pre-production testing, and production migration of WebUI deployments to self-hosted Kubernetes with common gateway.
- Improved scalability, operational control, and deployment consistency through standardized cluster and gateway patterns.

CI Tool WebUI (Full Ownership)

1. Created the CI Tool WebUI from scratch and delivered a production-ready baseline aligned to requirements for end-to-end CI reporting and tracking in one place.
2. Unified program and configuration visibility, build pipelines by type with status tracking, live log access, and pull request progress on a single operational interface.
3. Implemented reservation/task workflows, role-based actions, and reliability improvements for high-usage operational flows.

CI Tool Web Backend Microservices (Owned)

- api-prs: implemented paginated retrieval, date filters, approval update APIs, and health/metrics endpoints for PR operations.
- api-programs: implemented program discovery and dynamic query filtering, domain reviewers APIs, variant model updates, and health/metrics endpoints for program tracking use cases.
- api-builds and api-queue: implemented diff-manifest and build APIs, trigger/event publication flows, RC promotion, and request hardening for reliable service integration.

APK Infra Client UI (Frontend Ownership)

- Owned frontend for app-tag based compatibility automation where users create, edit, share, and run tests using target IP inputs.
- Enhanced analytics and task-result visibility with compatibility, ABI, CPU/memory, Dex2Oat, and AI-related fields.
- Delivered install-lite/launch-lite, recent task workflows, compare/export capabilities, and stability fixes for recurring production issues.

PLCPortal (.NET Product Lifecycle and Program Tracking)

- Full ownership for features, bug fixes, enhancements, and production changes.
- Maintained dashboards by integrating Jira, DNG, HP ALM, and Zephyr Scale for requirements, validation, and scan tracking.
- Single-handedly migrated the platform from .NET 3 to .NET 5 while resolving compatibility issues and replacing end-of-life modules.

EDUCATION

B.Tech, Computer Science - Biju Patnaik University of Technology, Bhubaneshwar, 2016 (CGPA: 8.55)

Higher Secondary (CBSE) - Gurunanak Higher Secondary School, Ranchi, 2011 (72%)

Secondary School (CBSE) - Jawahar Navodaya Vidyalaya, Gumla, 2009 (91.6%)

AWARDS AND CERTIFICATIONS

- Division Recognition Award (twice)
- 2nd Prize in company Hackathon and Innovation Fair
- Product Assurance and Security White Belt
